

## Allowing websites to access the camera and microphone in Chrome

Below is the most efficient way to give a website permission to the camera and microphone. If this does not work, then you will need to “restore settings to original defaults” under advanced settings, “reset and clean up.” (This is for Chrome only)

1. Click on the **lock** next to the address bar

2. Go to “**Site Settings**”

3. Be sure to select **Allow** for “**Camera**” and “**Microphone**”  
(There is also a “**Sound**” option as you scroll down)
